META MINER

INFORMATION GATEWAY

Bringing information into focus.

The Turn Key Solution to Creating a Searchable Data Clearinghouse

Overview

The Meta Miner Information Gateway provides organizations a cost effective solution to create their own data clearinghouse. Meta Miner can simultaneously search one or more physically distributed servers with a single query and return the result set as a single set of merged search results.

Meta Miner can be used as stand-alone application or as an integrated component of our Web Enterprise Suite, an integrated suite of applications that provide web mapping, cataloging, discovery, retrieval, delivery and e-commerce services.

Meta Miner Versions

Meta Miner WFS

With Meta Manager WFS you can create distributed Web Feature Server data networks. The application includes a stateless WFS client, a WFS server registration module and distributed WFS search and result set merge capability.

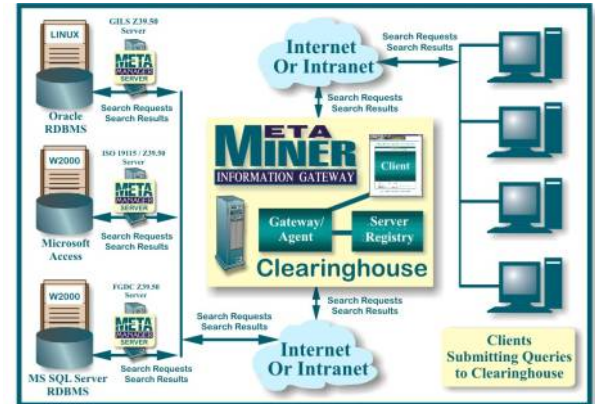

Meta Miner Z39.50

With Meta Manager Z39.50 you can create your own information clearinghouse. The application includes a Z39.50 client that provides intuitive search specification fields, a clearinghouse server registration module and clearinghouse server searching. The client look, feel and operation is fully customizable and supports XML processing.

Features

Meta Miner features include the following:

- A Web-based metadata server registration module that maintains server metadata in an relational database.
- Meta Miner can simultaneously search servers that subscribe to different profiles.
- The ability to merge different result sets from servers with different profiles.

- Perform a pre-search of meta data maintained in the clearinghouse to enable users to discover servers of interest prior to conducting the search.
- Support for simultaneous distributed searching of clearinghouse servers that subscribe to different clearinghouse profiles.
- An HTML-based administrative interface for maintaining server registration meta data.
- An HTML-based clearinghouse search client is included. Options for modifying the look-and-feel and operation of the client are available.
- Full support for XML processing.
- Support for many Z39.50 and WFS profiles.

Meta Miner is a component of:

Licensing and pricing information for **Meta Miner** and various options are available upon request.

Meta Miner is a component of Compusult's Web Enterprise Suite; a set of Internet-based applications and toolkits that support Web mapping, information cataloging, discovery, retrieval and delivery services.

Meta Miner is also a contributor to the Open Geospatial Consortium Catalogue Services Interoperability initiative.
